

Activity Timeline Report Terms and Explanations

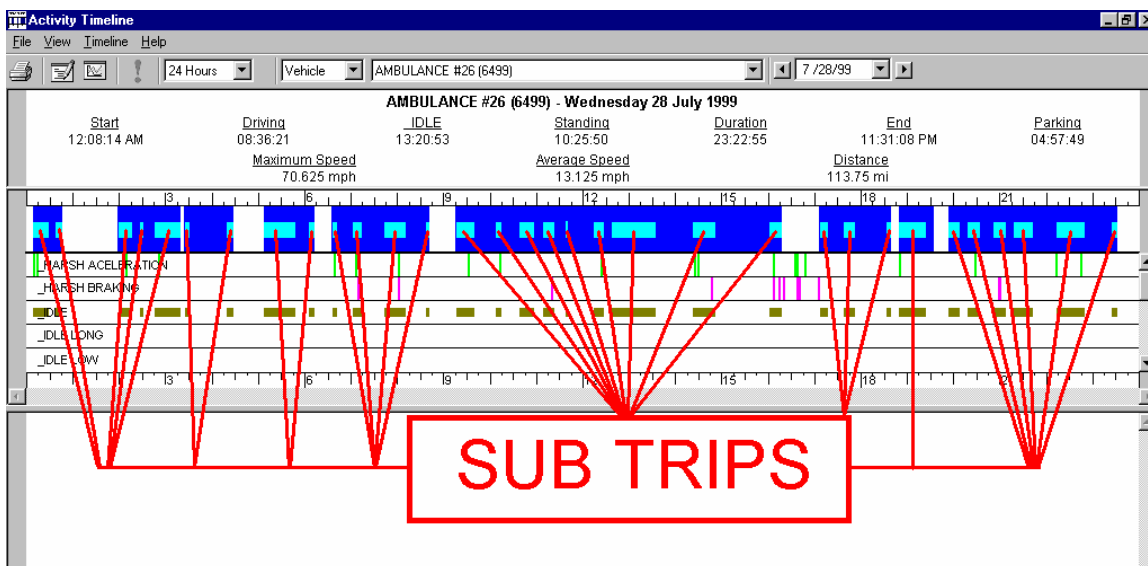

TRIP

A Trip is defined as the period during which the vehicle is in use. The FM considers the vehicle to be in use or active when the Ignition is on or when engine revs or road speed are detected. A trip ends if the vehicle is not in use for the Arming Delay time defined for the vehicle (default is 5 minutes).

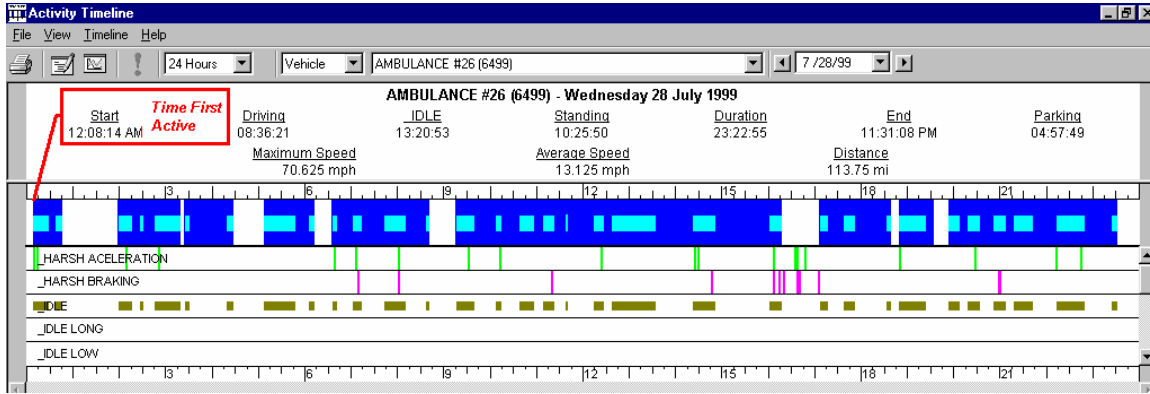

SUB TRIP

A Sub Trip is defined as each period during a trip the vehicle was moving. A Sub Trip will end at the end of the Trip or if the vehicle is stationary for longer than the Standing Delay defined for the vehicle (default is 2 minutes).

START

The Start of a trip is defined as the time when the vehicle becomes active. **Note:** If a trip carries forward from a previous day the start will reflect the first time the vehicle became active for that given day.

DRIVING TIME

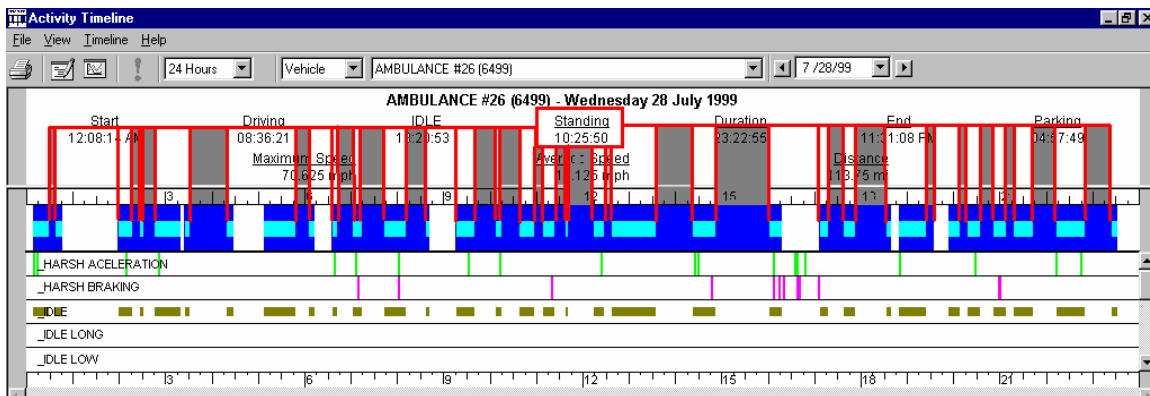

Driving Time is defined as the difference between the Depart and Halt times of a sub trip. The Driving Time for a Trip is the sum of the Driving Times for each sub trip in the trip.

IDLE TIME

Idle is the time the engine was idling, as per the definition of the "Idle" and "Idle - Excessive" events.

STANDING TIME

Standing Time is defined as the time within a trip that is outside of driving time, i.e. the time between Trip Start and first Depart, the time between each Halt and Depart, and the time between the last Halt and Trip End.

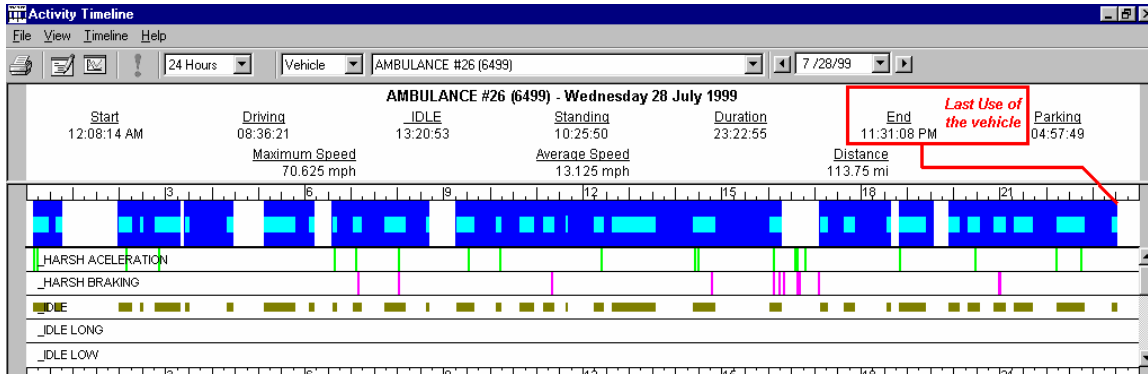

DURATION

The Duration is defined as the difference between the start and end times of the trip first and last trip for the given day. **Note:** If the beginning or ending trip carries over from/into the previous/next day this value may appear to be very short. This will be corrected in the next version of software.

END

The End of a trip is defined as the time when the vehicle becomes in active (i.e. the Ignition is OFF, and the engine is stopped), and does not become active again for the Arming Delay period. Note: If the trip carries over to the following day the End time will reflect the end of that particular trip.

PARKING

Parking is the time when the vehicle is not active, i.e. when the vehicle is not in a Trip.
