Introduction

The Fleet Manager Communications Suite is a collection of applications used to manage remote communications with Fleet Manager on-board computers equipped with remote communications modules. The suite includes the following applications:

- Fleet Manager SMS Processor
- Fleet Manager GSM Downloader
- Fleet Manager DECT Downloader
- Fleet Manager GPRS Service
- Fleet Manager Datatrak Service
- Fleet Manager AutoPoll Client
- Fleet Manager SMTP Mail Service
- [Fleet Manager Comms Scheduler Extension](#)

Fleet Manager SMS Processor

The Fleet Manager [SMS Processor](#) is used to send and receive GSM short message service (SMS) messages to and from FM200 series on-board computers equipped with GSM modems. Messages are sent and managed using the Fleet Manager [Active Tracking and Messaging Extension](#).

Fleet Manager GSM Downloader

The Fleet Manager [GSM Downloader](#) utilises a telephony device such as a modem to transfer information to and from FM200 series on-board computers equipped with GSM modems using GSM circuit-switched data (CSD) calls. Data transfer schedules are defined and managed using the Fleet Manager [Comms Scheduler Extension](#). Information downloaded from the on-board computers is written into files which are transferred into the Fleet Manager database by the Fleet Manager [AutoPoll Client](#).

Fleet Manager DECT Downloader

The Fleet Manager [DECT Downloader](#) transfers information to and from FM200 series on-board computers equipped with [FM DECT](#) modules using digitally enhanced cordless telephony (DECT) technology. Information downloaded from the on-board computers is written into files which are transferred into the Fleet Manager database by the Fleet Manager [AutoPoll Client](#).

Fleet Manager GPRS Service

The Fleet Manager [GPRS Service](#) is used to send and receive messages and transfer data to and from FM200 *Plus* series on-board computers equipped with GSM modems using the general packet radio service (GPRS). Messages are sent and managed using the Fleet Manager [Active Tracking and Messaging Extension](#). Data transfer schedules are defined and managed using the Fleet Manager [Comms Scheduler Extension](#). Information downloaded from the on-board computers is written into files which are transferred into the Fleet Manager database by the Fleet Manager [AutoPoll Client](#).

Fleet Manager Datatrak Service

The Fleet Manager [Datatrak Service](#) is used to send and receive messages and transfer data to and from FM200 *Plus* series on-board computers equipped with Siemens Datatrak Locators using the Datatrak network. Messages are sent and managed using the Fleet Manager [Active Tracking and Messaging Extension](#). Data transfer schedules are defined and managed using the Fleet Manager [Comms Scheduler Extension](#). Information downloaded from the on-board computers is written into files which are transferred into the Fleet Manager database by the Fleet Manager [AutoPoll Client](#).

Fleet Manager AutoPoll Client

The Fleet Manager [AutoPoll Client](#) is a utility that continuously "polls" a download module connected to your computer and automatically downloads trip, event and/or interval (tacho) data from green vehicle code-plugs that are inserted into the download module's code-plug socket.

The AutoPoll Client is also used to transfer information downloaded via code-plugs, the GSM Downloader, DECT Downloader, GPRS Service or Datatrak Service into the Fleet Manager database.

Fleet Manager SMTP Mail Service

The [Fleet Manager SMTP Mail Service](#) sends e-mail messages generated by the SMS Processor, GPRS Service and Datatrak Service using an SMTP mail server. Refer to the [Handset and E-Mail Notifications](#) documentation for more information.
